

Tetra Albatch

The gentle food processing system

So true to nature, even you will believe it's homemade

Tetra Albatch is a food processing system designed to fully match the fast-changing trends in prepared food. The quick and gentle system for mixing and heating makes sure that homemade taste is a promise you can always keep. Giving you maximum flexibility in both batch sizes and applications, it enables you to keep a wide and attractive line of products with improved profitability. Tetra Albatch is suitable for high and low viscous tomato products, soups and sauces, and also for jam, cake fillings and dairy desserts – with or without particles.

Introducing the gentle twist

In production: *Baked beans, pea soup, spaghetti bolognaise, tomato salsa and other tomato products, minced meat sauce, sauces for ready meals, fish soup, cake fillings, cream cheese, dairy desserts, chocolate products, jam & marmalade, oat products, rice pudding.*

Tetra Albatch is the ideal choice for mechanically sensitive products. The screw formed mixer construction keeps the particles intact, bringing out that genuine taste appreciated by both families and professional chefs.

The rapid processing cycle of Tetra Albatch starts with pumping or filling liquid, powder or solid ingredients into the mixer. A mixing method that minimizes air incorporation together with high-precision scraper blades keeps the tank constantly clean and improves heat transfer – this combination allows trouble-free production.

The quick-responding dimple jackets on Tetra Albatch enable gentle heating and cooling. Irrespective batch size or product, you are always in control, achieving the exact temperature required for first-class flavour.

Gentle vacuum treatment can be used for evaporation, de-aeration and flash cooling. The food processor is available in two sizes, 600 and 2,500 litres, and can be used either as a batch stand-alone unit or as a pre-treatment unit for continuous processing.

Quick heating and cooling means great taste and shorter production cycles. Tetra Albatch sets a new standard when it comes to low product losses and maintenance cost. The gentle twist is made possible through the unique screw form design, which is ideal for mechanically sensitive products.

Tetra Pak supplies complete processing solutions to the prepared food, dairy, cheese, ice cream and beverage industries. Tetra Albatch has a gentle mixing process, making it ideal for mechanically sensitive products, with or without particles.
